Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Nakajima et al. (6,529,875).

As to claim 1, Nakajima teaches a method of comparing voice signals (prints), comprising the steps of:

Comparing the first input voice signal to a pre-recorded second voice stored in the 'dictionary' and

Generating a similarity score of the similarities between the input voice signal and the voice signal stored in the dictionary (Col.2, lines 35-45).

"In the voice recognition device relating to this invention, the voice recognition section outputs a value indicating the state of the voice signal and a similarity level indicating the degree of similarity between the voice signal output from the voice input means and the contents of the voice recognition dictionary, and the voice recognition section has a first operating mode, wherein voice recognition is conducted on the basis of the similarity level in order to select the type of game action, and a second operating mode, wherein no voice recognition is conducted and the state of the voice signal is measured in order to set the state of the action. The voice recognition method relating to this invention comprises: a first step whereby a voice signal is received; a second step whereby the player's voice is recognized by comparing this voice signal with data from a previously defined voice recognition dictionary; and a third step whereby control signals relating to the game are generated on the basis of the recognition result from the second step. "

As to claims 2-4, Nakajima teaches where voice signals representative of specific players are stored for comparison with an input signal.

Allowable Subject Matter

Claims 5-30 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: the claims are allowed because Nakajima doesn't teach generating a graduated value and basing an entertainment application using the value as recited in the claims.
